

Soap Scratch Card

Goal: The goal of this activity is to get the students ready and excited to work on arts and crafts projects. With this activity students are able to create a game on their cardstock, and are able to come up with various treats and tricks that would be randomly picked.

Materials -

- Cardstock
- Clear packaging tape
- Dish soap
- Acrylic paint
- Paint brushes and plates
- Markers

Procedure -

1. Have students draw on the cards. Students could decorate their card however they like to
2. On dedicated spots (maybe include a template that they could use) have students write down their treats and tricks.
3. When students are satisfied with their card, helpers can cut out a piece of packaging tape that matches the size of the box where the trick or treat is written.
4. Once the tape is placed, mix the acrylic paints and dish soap onto a plate or cup in a 2:1 ratio (paint:soap)
5. Students will use this mixture to paint on top of the tricks or treat and cover so that guessers will not be able to guess which spot holds the treat or trick.

☆ Tips: Using a template may be easier for students since there would be clear boxes on where to write the tricks or treats. For more inspiration [click here](#)
